

# What is “raw” milk?

Raw milk is not typically sold in stores. It **has not been pasteurized** to kill harmful bacteria and can carry germs and viruses like E. coli, salmonella, and now bird flu.

## Can raw milk be harmful?

**YES.** Raw milk and products made from raw milk can cause serious illness, hospitalization, or death.

***If you or a family member consumed raw milk and feel sick, seek medical attention right away.***
